

Custom Fabricated Copper Shunts

Unique Proprietary Design

A proprietary design and manufacturing process for secondary connectors is available from Watteredge. This process revolutionized the manufacture of laminated shunts, replacing previous methods of soldering and clipped. Press Weld shunts and connectors give you cost effective operation through:

- Low resistance values equal to flat copper bar
- Minimal voltage loss
- Balanced flow of electrical current

Watteredge manufactures a broad variety of custom made shunts for each particular type of welding equipment. Strip copper is stocked in various sizes to meet most shunt design requirements. Refer to the laminated shunt selection form or consult your Watteredge sales representative for ordering assistance.
